

User Acceptance Testing (UAT) Template

Date	30-09-2026
Team ID	SWTID-2026-5226
Project Name	Study Buddy API
Maximum Marks	As per evaluation rubric

Project Overview:

Project Name: Study Buddy API

Project Description: A backend API for a study companion application that supports student accounts, study resources, study plans, tasks, progress tracking, and personalized study activities.

Project Version: 1.0

Testing Period: 30-09-2026 to 30-09-2026

Testing Scope:

- User registration, login, authentication, and authorization endpoints.
- Study material/resource creation, retrieval, update, and deletion.
- Study plan and task creation, retrieval, update, completion, and deletion.
- Progress tracking and retrieval of student study progress.
- Input validation, required fields, invalid requests, and appropriate HTTP status codes.
- API response format, error handling, and access control.

User Stories / Requirements to be Tested:

User Story ID	User Story
US-01	As a student, I want to register and log in so that I can securely access my study data.
US-02	As a student, I want to create and manage study resources so that my learning materials are organized.
US-03	As a student, I want to create a study plan and tasks so that I can organize my study schedule.
US-04	As a student, I want to mark tasks as completed so that my progress is updated.
US-05	As a student, I want to view my progress so that I can monitor my study activity.

Testing Environment:

URL/Location: Study Buddy API base URL / local development server

Credentials: Valid test student account credentials and authorized API token.

Data Flow / API Flow to be Tested:

Client → Authentication API → User Service → Study Plan/Task API → Study Resource API → Progress API → Database → JSON Response

The test flow verifies that authenticated requests move through the appropriate API endpoints, data is stored/retrieved correctly, and responses are returned with suitable status codes and messages.

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Student registration	POST valid student details to registration endpoint.	Account is created and success response is returned.		
TC-002	Student login	POST valid registered credentials to login endpoint.	Authentication succeeds and access token/session information is returned.		
TC-003	Invalid login	POST incorrect credentials.	API rejects request with appropriate error status and message.		
TC-004	Create study resource	Send authenticated request with valid resource data.	Study resource is created and returned with an identifier.		
TC-005	Retrieve study resources	Send authenticated GET request for resources.	API returns the student's available resources in the expected JSON format.		
TC-006	Create study task	Send authenticated request with valid task details.	Study task is created successfully.		
TC-007	Complete study task	Update a valid task to completed status.	Task status is updated and progress data reflects the completion.		

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-008	View progress	Send authenticated request to progress endpoint.	API returns current study progress for the student.		
TC-009	Unauthorized access	Call protected endpoint without valid authentication.	API denies access with an appropriate authorization error.		
TC-010	Input validation	Submit missing/invalid required fields.	API returns validation error without creating invalid data.		

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	No bugs recorded at test preparation stage.	N/A	Low	Open	Update during UAT execution.
BG-002	Reserved for API validation/authentication issue found during testing.	To be recorded by tester.	Medium	Open	Add evidence and response details if encountered.

Sign-off:

Tester Name: _____

Date: 30-09-2026

Notes:

- Ensure that all API test cases cover both positive and negative scenarios.
- Verify HTTP status codes, JSON response structure, validation messages, and authentication behavior.
- Record detailed feedback, including reproducible steps and relevant request/response evidence.
- Bug tracking should include severity, status, and steps to reproduce.
- Obtain sign-off from the project manager and product owner before deployment.
